TH PLANTATIONS BERHAD

KUALA LUMPUR: TH Plantations Bhd posted a 46.7 per cent jump in net profit for the third quarter ended Sept 30, 2025 to RM31.6 million from RM21.5 million a year earlier.

This was supported by a stronger operational showing, higher revenue and reduced other expenses.

Its quarterly revenue edged up three per cent to RM259.6 million from RM252 million.

This was lifted by higher average realised prices for crude palm oil (CPO), palm kernel (PK) and fresh fruit bunches (FFB), as well as increased sales volumes of PK and FFB, TH Plantations' Bursa Malaysia filing showed.

The company did not declare any dividends for the quarter.

For the nine-month period, TH Plantations reported a net profit of RM56.2 million, up from RM44.9 million, while revenue rose 8.46 per cent to RM658.71 million compared with RM607.32 million in the corresponding period last year.

The company said the outlook for CPO prices remains challenging, with uncertainty and pressure expected in the next quarter due to competitive global demand, geopolitical risks and rising output.

It added that with production likely to peak in the fourth quarter and strong supply from other vegetable oils, especially soybean oil, downward pressure on prices is expected to continue.

"Market direction will also hinge on the pace of Indonesia's biodiesel programme. Our continuous efforts in mechanisation and automation have helped enhance our operational performance.

"Enhancing human capital competencies and operational efficiency remains our top priority in addressing escalating costs, particularly those arising from compliance with minimum wage requirements and statutory contributions for immigrant workers," it said.
