

FOR IMMEDIATE RELEASE

TH PLANTATIONS AND CENERGI SEA COMMISSION 1.2 MW CENERGI LAWIANG BIOGAS POWER PLANT

KLUANG, JOHOR | 15 January 2026 — TH Plantations Berhad, in collaboration with Cenergi SEA Berhad, has commissioned the 1.2 Megawatt (MW) Cenergi Lawiang Biogas Power Plant, marking a significant milestone in the renewable energy partnership between the two companies and advancing sustainable waste-to-energy solutions within the plantation sector.

The project is undertaken by Cenergi Lawiang Sdn. Bhd., a joint venture between TH Plantations Berhad (THP), the plantation arm of Lembaga Tabung Haji and Cenergi SEA Berhad (Cenergi), a subsidiary of UEM Lestra Berhad. Although the plant achieved its Commercial Operation Date on 26 December 2025, today's commissioning ceremony formally marks the completion and operational readiness of the facility.

The biogas power plant converts Palm Oil Mill Effluent (POME) into clean, renewable electricity through methane capture and utilisation. At full capacity, the facility can generate enough green energy to power approximately 1,500 homes annually and reduce up to 20,000 tonnes of carbon dioxide emissions each year—an environmental impact equivalent to removing more than 4,000 cars from the road.

Speaking at the launching ceremony, Ir. Kwok Yew Hoe, Group Chief Executive Officer of Cenergi SEA Berhad, said the project demonstrates how sustainability can be translated into practical and scalable solutions.

"The Cenergi Lawiang 1.2 MW Biogas Power Plant shows how environmental challenges can be transformed into long-term value through innovation and strong partnerships, following the signing of the project agreement between Cenergi and THP in June 2024. With the commencement of operations at Cenergi Lawiang 1.2 MW Biogas Power Plant, Cenergi now operates 24 biogas plants with a combined installed capacity of 41.9 megawatts. We are proud to collaborate with THP in advancing biogas technology and delivering impactful renewable energy solutions that create both environmental and economic value for Malaysia," he said.

Meanwhile, Datuk Ts. Borhan Bachi, Chief Executive Officer of TH Plantations Berhad, said the project aligns with the Group's sustainability strategy, particularly in strengthening waste management practices and reducing greenhouse gas emissions across its operations.

"This biogas facility demonstrates how plantation operations can play an active role in supporting Malaysia's energy transition, while improving operational efficiency through the adoption of renewable energy technologies," he said.

By supplying renewable electricity to the national grid under the Sustainable Energy Development Authority (SEDA) Feed-in Tariff (FiT) scheme, the Cenergi Lawiang Biogas Power Plant contributes to Malaysia's broader energy transition efforts, in line with the National Energy Transition Roadmap and the country's aspiration to achieve a low-carbon and Net Zero future by 2050.

The project stands as a strong example of how strategic collaboration between renewable energy developers and plantation operators can support the circular economy and deliver meaningful environmental impact.

About TH Plantations Berhad

As the plantation arm of Lembaga Tabung Haji, THP is engaged primarily in the cultivation of oil palm with planted hectareage of more than 55,000 hectares covering 38 estates and 6 mills in the Peninsular Malaysia, Sabah and Sarawak as well as in Kalimantan, Indonesia. THP was first incorporated in 1972 as Perbadanan Ladang-Ladang Tabung Haji Sendirian Berhad and was listed on the Main Board of Bursa Malaysia Securities Berhad on 27 April 2006.

About Cenergi SEA Berhad

Cenergi SEA Berhad (Cenergi), a subsidiary of UEM Lestira Berhad, is a premier sustainable energy solutions provider focused on reducing carbon emissions through Renewable Energy (RE), Energy Efficiency (EE), Renewable Energy Certificates (RECs), and Carbon Credit initiatives.

Cenergi is currently Malaysia's largest grid-connected POME biogas player, with 38 biogas power plants delivering a combined installed capacity of 62.98 MW, including projects under construction. Beyond biogas, Cenergi actively develops and operates solar, small hydro, and energy efficiency projects, supported by a robust and growing expansion pipeline. Cenergi also offers RECs and Carbon Credits to support decarbonisation and net-zero goals.

To date, Cenergi has secured and executed ground-mounted solar farms and corporate rooftop solar programmes with a combined capacity of 128 MWp, alongside energy efficiency programmes valued at RM48.3 million, implemented in collaboration with partners including a public university and an international major retailer.

As of December 2025, Cenergi has contributed 1,005 GWh of renewable energy to Malaysia's national grid and helped avoid more than 5 million tonnes of CO₂ equivalent emissions.
